

# Reimagining Global Health through Artificial Intelligence: A Roadmap to AI Maturity

## Global challenges

AI is today's defining technology, and greatest opportunity to address growing challenges:

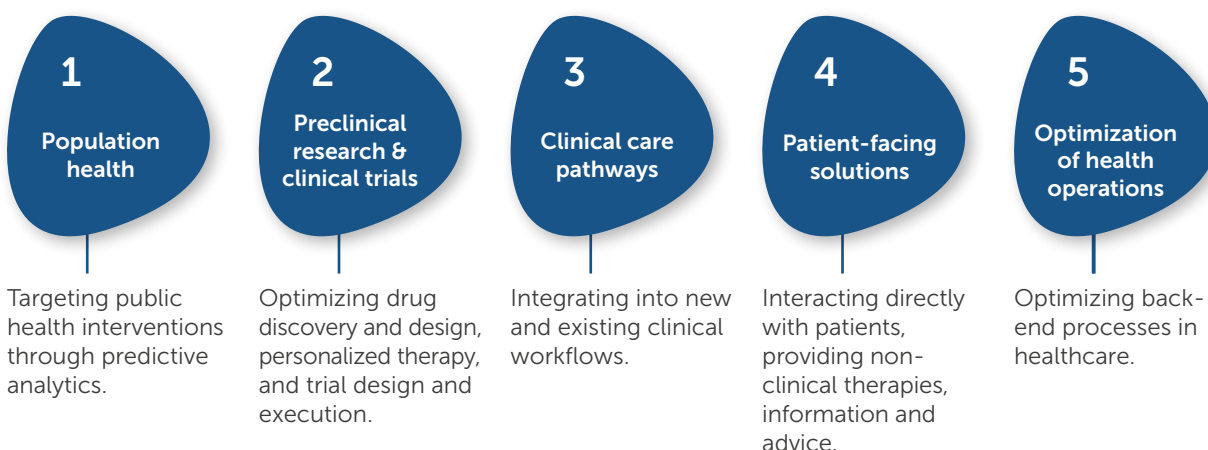

## Potential of AI

## Top 5 use cases for AI in health

A new report from the Broadband Commission Working Group on Digital and AI in Health identifies five use cases for how AI is addressing global and public health priorities, strengthening health systems, and improving outcomes for patients.

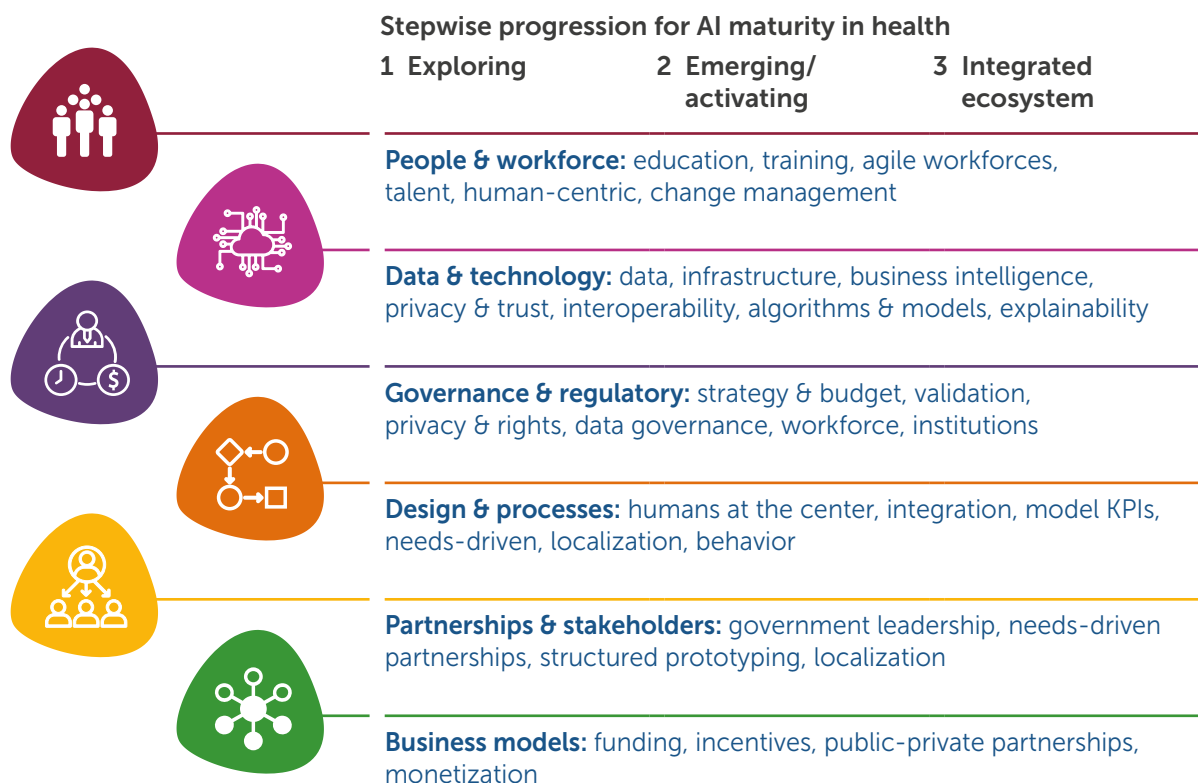

## The roadmap for AI maturity in health

The report presents actionable recommendations tailored to individual stakeholder groups, enabling governments, health organizations, civil society, the private sector and others to capture the game-changing capabilities of AI for health.

The recommendations are grouped into six interdependent areas that must all be prioritized to enable mature integration of AI in health.

An accompanying roadmap charts three stages on the progressive path towards AI maturity in health.

## Six areas for AI maturity in health

## About the working group

Digital and AI technology offer an unprecedented opportunity to transform health systems from being reactive to preventative and even predictive. The Working Group on Digital and AI in Health is tasked with generating knowledge about how these technologies can advance health and care globally. The working group's comprehensive landscape review identified actionable recommendations for how governments and other stakeholders can create the ecosystem necessary to achieve mature integration of AI in health.

The objective of this report, **Reimagining Global Health through Artificial Intelligence: A Roadmap to AI Maturity**, is to generate knowledge on the challenges, lessons learned, and best practices for AI solutions in health, and to provide actionable recommendations.
